CF Meetup: ColdFusion and Flex, with Dale Fraser

Thursday, May 22, 2008 at 6:00 PM

Meeting URL: <http://experts.acrobat.com/cfmeetup/>

Organized by [Charlie Arehart](#)

Description: So how hard is it to write Flex applications that utilise ColdFusion components? It's actually very easy, easier than you might think. One of the reasons for giving this talk is that I initially found it hard to get my head around how it would work, how to configure it all and looked at it and then put it aside a few times. >From doing this I have learnt what I think is the easiest way to get ColdFusion & Flex configured to work together, this is what I will be demonstrating.

I'll show the basics of configuration (Flex Builder and some setup of CF), then will show and discuss several forms of integration: remote objects, remoting & binding, and using queries, arrays, structures, and objects/CFCs.
