In this 20-30 minute session, Patrick Quinn will preview his one-hour class on Application Server Analytics (ASA), an evolving niche in Web-based software development. It consists of a combination of tools and methodologies for real-time monitoring and troubleshooting of Web sites and applications. The goal of ASA is to improve performance and stability (and thus uptime) for Web applications by helping developers and systems administrators "see" application server internals much more clearly, and also by allowing for much easier use of ASA metrics to fix and even prevent problems..
