Our new Track Chair for the Integrating Technology Track is Steve Nelson (Webapper Services, LLC)

Steve Nelson has been developing with ColdFusion for the past decade. Many ColdFusion enthusiasts will recognize him as the creator of Fusebox, a popular application framework utilized by thousands of ColdFusion developers. In addition to serving as a technical editor for numerous ColdFusion and Fusebox publications, Steve has also authored the book "Fusebox: Methodology and Techniques". Steve is no stranger to massive ColdFusion projects, sometimes managing and coordinating over 100 remote contractors simultaneously. Though he made and lost millions in the blink of an eye during the "dotcom era", Steve presently spends his days as a Senior Web Architect for WebApper, developers of the popular ColdFusion server monitoring tool SeeFusion.

The INT Track is made up of the following topics.

Steve Nelson Building Google Maps Applications with ColdFusion

Michael Dinowitz Google webmaster tools step by step

Peter Bell Practical Code Generation

Adam Howitt Build a scalable architecture with Amazon's EC2

Charlie Arehart Interactive Step Debugging with the CF8 Debugger

Mark Drew CFEclipse Reloaded

Steve Nelson Building offline applications with Google Gears

Phill Nacelli Integrated ColdFusion Development Environment
