Duration: Approx. 1 hour

COOP - A Framework That Thinks Like ColdFusion, with John Farrar

COOP is the most ColdFusion-like Framework to date (and yet, if you use another framework, note that COOP works with or separate from other frameworks). ColdFusion gives the power to simplify your code by moving your processing completely off your markup page if you choose. Let designers work in a processing free page while developers still have complete access to the markup page through a object-oriented structure. If you like MVC you will live COOP. If you don't like MVC you will say along with a developer we met at Chicago CF United, 'Finally, an MVC that makes things simple.' (This technology can be used as a stand-alone technology or inside other Frameworks like Fusebox.)
