CF Meetup: CFInterface , with Robin Hilliard

Thursday, May 1, 2008 at 11:00 PM

Meeting URL: <http://experts.acrobat.com/cfmeetup/>

Organized by [Charlie Arehart](#)

Description: With all the fantastic new features in ColdFusion 8 you could be forgiven for overlooking the CFInterface tag. But with the introduction of CFInterface Adobe has given us a fundamental concept of most object oriented programming languages that has been missing since the introduction of components in CFMX, a concept used to great effect in many key design patterns and extensible software frameworks like Eclipse.

In this presentation Robin explains what an interface is, how they're used in software design and how to use CFInterface to bring them to your ColdFusion applications. It's a lot simpler and cooler than you might think.
