Spreading the News: Brian Kai, a 2008 CFUnited Alumni, developed an iPhone /iPod Touch application available for free on the iTunes AppStore. The app is called CF_REF and is simply a CF tag reference application that allows one to browse CF tag syntax without being online or carrying around a large reference manual. It?s his very first iPhone application but I plan on updating it the more I learn about Objective-C and Xcode. He initially designed this app for his own benefit but after a couple coworkers expressed interest in it, he decided to submit it on the AppStore so others can benefit as well.

We love to share what the CFUnited Alumni community has learned and developed. If you have a cool application you'd like to share, let us know and we'd be happy to spread the word. :-)
