CFUnited Podcast: Matthew Woodward - OO Architecture Back to Front

Hosted by Christian Ready

Description

Many of the materials currently available for learning object-oriented programming in ColdFusion do an excellent job of explaining the basic concepts, but leave a bit to be desired in terms of teaching developers how to truly architect an enterprise application in ColdFusion using object-oriented principles and processes. This session will bridge this knowledge gap by outlining an object-oriented architecture in ColdFusion from back (your database) to front (your presentation layer) and everything in-between. Come to this session to learn how to better architect your OO ColdFusion applications.
