Kelly Brown has a new topic for the Manager/Empowered Programming Track "Introducing the Spry framework for AJAX" <http://www.cfunitied.com/topics.cfm#664>

Adobe has pre-released an initial version of the Spry framework for AJAX development. This new framework allows you to easily add AJAX functionality to your web sites. Just include a couple JavaScript libraries and you can add AJAX capabilities to your site with a minimal amount of coding. It is designer friendly and based on familiar technologies of CSS, HTML, and JavaScript. This session will give an overview of the framework, demonstrate the ease of incorporating it into your site, and discuss the advantages and disadvantages of using it for your RIA development.

This session is 2:45pm on Friday.
