This trio will be speaking on "End to End Performance Tuning" in the Databases, Deployment, Testing Track.

Finger Pointing. Fact or Fiction. Fact in our book with so many enterprise applications dependent on multiple application tiers. In this session we are looking to bring experts together on each application tier to get the full story on end to end performance tuning. That's right, you will learn valuable techniques from CF, web server, database (SQL Server), Windows, hardware and storage experts on how to tune your CF based applications.

Ben Forta is on record as having only done CFUnited's keynote presentation each year. It will be a treat to see Ben, Nate, and Jeremy discuss these techniques and more!
