Hello everyone,

We have another BOF posted on the schedule!

[BOF: Mach II - We are Community Driven](#)

Whether or not you are a user of Mach II consider attending this discussion about Mach II and building object-orientated applications. We will chat about the news on the latest features in 1.8 and 1.9 releases, how to get started learning the framework and OO programming, and where Mach II is headed in the future. We will also share tips, tricks and resources for using Mach II to build powerful CF applications. We would love to hear how you have used the framework to build cool applications. We value the community's feedback about Mach II and look forward to seeing you there.

This BOF will be hosted by [Kurt Wiersma](#) on **Thursday, July 29th at 6:30 pm.** Make sure to add this in to your schedule!

Kurt will also be presenting on [Real World ColdSpring](#) and [Setting up a Solid Local Development Environment](#).

Happy scheduling!
