We are almost full on assigning new topics. Here are a few of the last to announce.

"Building your first RIA app with CF & Flex" by Adam Wayne Lehman
Adam Lehman is the ColdFusion Specialist at Adobe Systems Incorporated based out of Washington, DC. Prior to joining Adobe, Adam was the Senior Web Engineer for the U.S. Department of State where he managed a team of developers and architected enterprise ColdFusion-based applications. Adam also founded and managed the Department of State Adobe Developer User Group for over two years. His background also includes several years designing and programming e-learning applications for Johns Hopkins Bloomberg School of Public Health. Adam has been developing web applications specializing in ColdFusion for over a decade. His work has been featured in Macromedia's DRK (Developer Resource Kit) and his other areas of expertise include application security and Oracle database development.

"BlazeDS and LiveCycle Data Services for ColdFusion 8" by Tom Jordahl
Tom Jordahl is a Senior Computer Scientist at Adobe and the architect for ColdFusion. As part of the original ColdFusion team, he has implemented a wide variety of tags, functions, and features in both the original (C++) and MX (Java) releases of ColdFusion. He is one of the primary implementers of the Apache Axis SOAP engine, and is the Adobe representative on the W3C WSDL 2.0 working group. Before diving into web services, Tom was the technical lead for ColdFusion on UNIX, leading the efforts to bring ColdFusion to Solaris and Linux. Prior to joining Allaire in 1997, he worked at the Open Software Foundation (OSF) on the Distributed Computing Environment (DCE) and the OSF /1 UNIX operating system. Tom is currently hard at work on the next major release of ColdFusion.

Descriptions coming soon.
