John Paul Ashenfelter - Agile ColdFusion - Delivering better apps in less time

Posted At : February 24, 2007 11:19 AM | Posted By : Christian Ready
Related Categories: podcast

ColdFusion has always been an excellent tool for rapidly delivering high-quality web applications, but by adopting techniques and software from the Agile world, we can deliver applications even faster. In this session, we'll take a look at how we can use open source frameworks, automated database/object-relational mapping software, and unit tests to quickly build a simple application. The proof for Agility will be this session itself - we'll build a small but non-trivial ColdFusion application using a selection of these tools during the session. We'll start with an empty directory and end up with a fully-functional and tested prototype site before the timer ticks down.
