Related Categories: podcast

"Atlas" is Microsoft's new cross-platform/cross-browser framework for building rich, client-centric AJAX-style Web applications. In this keynote you will see an exciting overview of "Atlas" and learn about data-binding, modernized object-oriented JavaScript techniques, designing interactive UI and more. Follow along as we explore how the "Atlas" controls and components remove the complexity from designing rich, interactive experiences, and help you build AJAX-style applications more quickly. Get more information at <http://atlas.asp.net/>
