Do you want to write better programs? Maybe thinking about programming in a different way would help. Mindmapping is a way to visually work with ideas that was invented in 1970. Now used by millions of people worldwide, mindmapping uses both the left (logical) and right (visual) sides of the brain - so that we can more than double our productivity! Learn how to create effective mindmaps for requirements gathering, program architecture, project management and more. I will demo some mindmapping tools and given an interactive mindmapping exercise for attendees too. Don~'t miss it!
