

Grant Straker - Troubleshooting and Optimizing CFMX Performance

Posted At : June 6, 2007 12:00 AM | Posted By : Christian Ready

Related Categories: podcast

Find out how to optimize and troubleshoot CFMX driven applications. You will learn how to quickly debug and identify issues such as the server CPU going to 100%, what causes out of memory errors and how to track memory leaks. The session will also cover how to optimize your application for performance and scalability as well as how to monitor what is going on in the underlying java architecture. Grant is an experienced ColdFusion Developer who runs Straker Interactive, a successful ColdFusion software development house with offices in New Zealand, Australia and the UK. Many of the lessons you will learn in this session have been learnt the hard way and in 50 minutes you could save yourself many hours of head scratching and frustration down the track.
